

The interference caused to the HF spectrum from BPL MUST be considered, not only for the Amateur world, but Military as well. I am an Army MARS member and our service to our Federal and State customers would come to an end with the interference caused by radiating electrical components throughout the entire US. Money can not be the driver for allowing Part 15 to be totally ignored. Your consideration in this serious matter will be judged by all US citizens.

Daniel A. Duffin
